About Amplexa Genetics?

Serving Healthcare Professionals since 2006.

Amplexa Genetics is a front-runner. Founded in 2006, Amplexa Genetics is one of the oldest private clinical genetics laboratories in the world! Amplexa Genetics is close to celebrating 10th anniversary in a field only slightly older than a decade – we know what we are talking about!

Strong Scientific Foundation

In collaboration with distinguished scientific experts, Amplexa Genetics has developed and implemented more than 100 clinical genetic tests in the fields of neurology, endocrinology, cardiology and oncology. Tests offered cover high significance genes, i.e. genes where the published scientific literature corroborates the impact of the specified genes on disease liability.

Skilled researchers totaling more than forty years of experience in genetics and genetic analysis supported by a strong network of experts, which provide ad-hoc assistance in interpretation of unique or difficult-to-interpret findings, are at your service.

"Helping you, help your patient."

Strong Technical Foundation

Amplexa Genetics uses state of the art targeted Next Generation Sequencing (tNGS) technology running disease panels in several disease areas; further to that Amplexa Genetics also operates standard capillary electrophoresis.

Why Use Amplexa Genetics?

Amplexa Genetics is committed to delivering:

- + Fast turn-around-time – weeks rather than months.
- + Competitive pricing.
- + High quality analysis and clinical genetic reports.

Amplexa Genetics provides results in an easy-to read-report, which will help you help your patient.

Why use a genetic test?

A genetic test is useful for both the medical doctor (MD) and the patient! It is a win-win. As MD you can use a genetic test to confirm the suspected diagnosis, making it possible to formulate a clear personal care plan for your patient. If a genetic test does not confirm your suspected diagnosis, you can wholeheartedly focus your efforts in another direction without detriment to the patient.

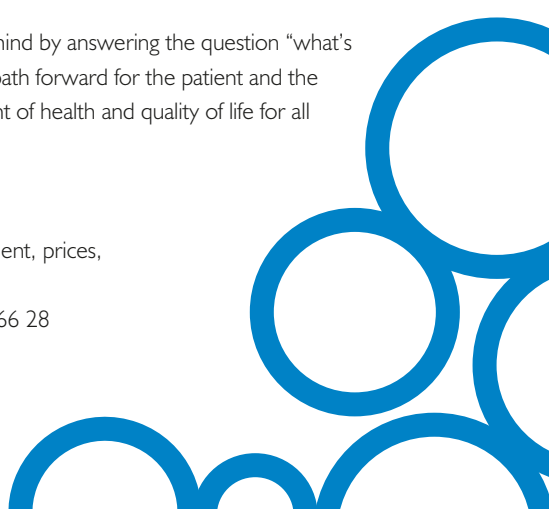

A diagnosis helps the patient by providing piece of mind by answering the question "what's wrong with me". A diagnosis helps define the best path forward for the patient and the family, with the possibility for significant improvement of health and quality of life for all affected.

How to order a test?

For information on how to order a test for your patient, prices, turnaround time etc., contact Amplexa Genetics
